

# Blast From The Past

*HackIt!*

(or, how HD stole our shit)

# What is “HackIt!”?

## ⊠ Exploitation Framework

- ⊠ Remote penetration
- ⊠ Local exploitation

## ⊠ Cross Platform

- ⊠ Linux
- ⊠ FreeBSD
- ⊠ SunOS
- ⊠ Windows 95

## ⊠ Modular Architecture

## ⊠ Sound familiar?

# Dates and Versions

## Download HackIt!

### PLATFORMS

HackIt! v.1.0.0 has been developed, compiled, and tested on Slakware Linux with a 2.0.32 kernel. I have not had time or resources to compile and test on any other platforms, however, I would appreciate any feedback from anyone attempting to compile and use HackIt! on other platforms. Ports to other platforms are currently under development.

HackIt! is released under the GNU Public Liscensing agreement. For more information on GPL, go [Here](#).

# How HackIt! Works

## ☒ Multi-Level Architecture:

- ☒ Level 0: Main HackIt! Engine

- ☒ Level 1: Reconnaissance

  - ☒ Module: scanit

- ☒ Level 2: Information Disclosure

  - ☒ Modules: phfit, phpit, nfsit, hsit,

- ☒ Level 3: Remote Penetration

  - ☒ Modules: crackit

- ☒ Level 4: Local Exploitation

  - ☒ Module: rootit

# Framework Module Conformance

## Standardized Input

-  Level 1 command-line options

## Standardized Output

-  Level 1 output feeds Level 2 modules
-  Level 2 output feeds Level 3 modules
-  Etc...

## More info in `hackit.cf`

# Target Selection

 Single Host:

 `./hackit -s <target>`

 Multi-Host:

 `./hackit -l <list-file>`

# The big Questions...

# Is HD an Innovator?

*Or just “Hitler’s Driver?”*

# Is Metasploit Original?

Or just a rip-off of our project  
from 1997?

*You be the judge...*
